Personal Automation / LLM Integration

- **Designed** a **two-flow n8n architecture** separating real-time Telegram **chat** handling from **scheduled** automation, enabling independent deployment, debugging, and failure isolation between the two concerns
 - **Implemented LLM-powered intent classification** routing messages across 8 branches (log, query, edit, delete, summaries, report, recurring, help) using Groq's free-tier **llama-3.3-70b-versatile**
 - **Built** a **safe edit** pipeline that reads the full existing row before writing, merges only the changed field, and appends a timestamped audit trail to the original message column — preventing data loss from partial overwrites
 - **Engineered** a locale-resilient date parser handling 5 date formats to decouple bot logic from Google Sheets regional settings.
